13. ABSTRACT

The most authoritative catalogs of photographs of all Gemini missions are assembled into this report. Included for all photographs are JSC identification number, percent cloud cover, geographical area in sight, and miscellaneous information. In addition, details are given on cameras, filters, films, and other technical details. This document contains the primary reference documents for identification of all Gemini photographs of the earth.

ABSTRACT

The most authoritative catalogs of photographs of all Gemini missions are assembled into this report. Included for all photographs are JSC identification number, percent cloud cover, geographical area in sight, and miscellaneous information. In addition, details are given on cameras, filters, films, and other technical details. This document contains the primary reference documents for identification of all Gemini photographs of the earth.

ACKNOWLEDGEMENT

Most photographs were personally identified by Richard Underwood, Technical Assistant to the Chief, Photographic Technology Division of NASA at JSC. The community of scientists in remote sensing is in his debt for this pioneering work.

We are also in great debt to Margaret Greenwald, retired from the Research Data Facility at JSC. She early recognized the archival value of these documents. She cataloged them and strived to maintain them in usable form for specialists in remote sensing.

The author is also grateful to Eddis Laity, who is currently in charge of the Research Data Facility. Ms. Laity also understood the value of these data. She collaborated fully in assembling this document and preparing it for permanent archiving as a JSC document.

1. INTRODUCTION

1.1 BACKGROUND

The first bright flush of photographs of the earth's surface taken from space came with the manned Gemini missions. Photographs of interesting parts of the entire globe were suddenly available to earth scientists and layman alike.

Most striking was the sheer beauty of the earth, as seen from this new perspective. Most people were not prepared for this first firm evidence that man was now in space for good. They were even less prepared for the great beauty and diversity that these photographs showed. We truly live on a photogenic planet.

There have been many advances in the collection of images of the earth since Gemini days. Most notable were the Skylab photographs taken in 1973 and 1974, and the multispectral scanner images currently being taken by Landsat-1 and Landsat-2. Still, the Gemini photographs will always be useful to represent the beauty of our earth. They will also serve as a permanent record of the earth as it was at the time they were taken--the only such record taken from the perspective of space. As such, they constitute a valuable patrimony of the space age which needs to be conserved and made available for use.

1.2 PURPOSE OF THIS DOCUMENT

None of the documents included here were listed in any abstracting service available to the public, nor have they been assigned JSC numbers, the primary accounting system for JSC publications. As a result, few remote sensing specialists are aware of their separate existence, and the entire conjunction exists only in the libraries of individual scientists.

However, all of these documents are catalogued in the Research Data Facility, REDAF, at the Lyndon B. Johnson Space Center, Mail Code SF12, Houston, TX. 77058. The existence of this facility is not widely known in the domestic community of remote sensing, and many specialists within NASA are not aware of it. In foreign countries it is virtually unknown.

This document assembles these primary references under one title that has been entered into the JSC document system, making the information accessible to a wider range of scientists. It will probably be indexed in Scientific and Technical Aerospace Reports, STAR, and become a public document accessible to any interested person.

1.3 USE OF THIS DOCUMENT

This document is essentially a collection of primary research documents (ref. 1-10). As such, it suffers from the defects of the original documents. There are two primary ways of using it.

First, a companion publication, "Index Maps for Gemini Earth Photography," (ref. 11) may serve as a convenient atlas. This document was prepared in the same spirit, to make available certain materials whose existence was not widely known.) Reference numbers in the maps can be traced back to the JSC identification numbers which appear in these documents. The document is available in microfiche and Xerox copy.*

Another document, "GEMSORT," exists to bring some order into recovery of Gemini and Apollo photographs (ref. 12). This document contains the contents of data files for a computer program that lists photographs by geographical regions. Since it is also abstracted in STAR, it is available from NTIS in Xerox copy.

*from NTIS, the National Technical Information Service, Springfield, VA. 22151

Beyond these two aids, the lists included sections 2 through 11 of this document, which can be searched sequentially. The total number of photographs in these lists is probably within reason for such a search.

1.4 SIMILAR INFORMATION FOR ROCKET FLIGHTS AND THE MERCURY, APOLLO, SKYLAB, AND APOLLO-SOYUZ MISSIONS

Although not formally a subject of this document, this is a convenient place to list sources of information on other manned missions. For completeness, a source of rocketing information is also listed.

The earliest space photography of the United States and Mexico came from V-2 rockets launched from White Sands Proving Grounds. Data from these early flights are very poorly organized, but all are, in theory, available from:

National Space Science Data Center (NSSDC)
and U.S. World Center A for Rockets and Satellites
Goddard Space Flight Center
Greenbelt, Maryland 20771

This same organization is charged with handling international data from rockets and satellites.

A few useful photographs were taken in the Mercury flights. These are listed in reference 13.

Indices are available for the Apollo Missions (ref. 12, 14-19), Skylab Missions (ref. 20-23), and the Apollo-Soyuz Mission (ref. 24). Some are abstracted in STAR and therefore, available through NTIS; the remainder are maintained in REDAF.

In addition, there are several country indices prepared and in preparation. Available at this time are complete indices for Bolivia (ref. 25) and Mexico (ref. 26).

1.5 OBTAINING COPIES OF GEMINI PHOTOGRAPHS

The best of the Gemini photographs can be seen in two fine books published by NASA (ref. 27, 28). Both contain color reproductions and both are priced reasonably. They may be purchased from:

U. S. Government Printing Office
Washington, D. C.

Some other books with photographs from space are listed in references 29 through 31.

Individual copies of all photographs from manned missions are available through the following organization:

EROS Data Center
U.S. Department of the Interior
Sioux Falls, South Dakota 57198

This organization is also charged with furnishing images from other manned missions, as well as data from Landsat-1 and Landsat-2.

1.6 CONTENTS OF THIS DOCUMENT

Sections 2 through 11 of this document contain copies of original documents, and section 12 contains a list of references. Since no changes have been made to the text of any of these documents, pagination is specific to each section.

5. GEMINI VI
Ref. 4

GEMINI VI (December 15-16, 1965)

70MM PHOTOGRAPHY IDENTIFICATION

Camera: Hasselblad Model 500 (NASA Modified)
 Lens: Zeiss Planar 80mm F.L., F= 2.8
 Film: Eastman Kodak, Ektachrome MS (S.O. 217)

Liftoff: 13:37 Zulu (G.E.T.=00:00)
 Splashdown: 15:28 Zulu
 Duration: 25 hr, 51 min., 24 sec.

Photography By: Captain W.H. Schirra, Jr.,
 Major T.P. Stafford,
 Identification By: R. W. Underwood (NASA/MSC/E
 Date: June 15, 1966 (To be revised)
 (2nd Rev.)

MAGAZINE "A"

* Distance in feet camera to adapter equipment section - length of spacecraft 18.3 ft (5.6M);
 Photo Secured at 185 Mile Altitude camera to nose - 8.3 ft (2.5M).

GERINI VII (December 4 - 18, 1965)

70MM PHOTOGRAPHY IDENTIFICATION

Camera: Hasselblad, Model 500-C (NASA Modified) Liftoff: 19:30 Zulu (G.E.T.=00:00) Photography By: Lt. Col. Frank Borman
 Lens : Zeiss, Planar, 80MM Focal Length, F: 2.8 Splashdown: 14:05 Zulu Cdr. James A. Lovell, Jr.
 Zeiss, Sonnar, 250MM Focal Length, F: 4.5 Duration: 330 hr, 35 min, 1 sec. Identification By: R. W. Underwood, (NASA/MSC/BL)
 Film : Eastman Kodak, Ektachrome, MS (S.O. 217) Rolls 13, 17, 22, 23, 24, & 25
 Eastman Kodak, Ektachrome, MS (S.O. 217) Roll 30 (Exposed for ASA-500) Date: June 15, 1966 (2nd Rev.)
 Eastman Kodak, Ektachrome, Infrared Type-8443, Roll 26 Altitudes in Nautical Miles: Revs. 3 to 44 (120 to 174); Revs. 45 to 75 (128 to 171);
 Eastman Kodak, Pan-Atomic-X Type 3400, Roll F Revs. 76 to Retro (161)
 Eastman Kodak, Type 2475, Roll J

NOTES: (1) Rendezvous distances from camera to adapter equipment section of other spacecraft. Total length of spacecraft = 18.3 ft. (5.6 meters)
 Distance from camera to nose of taking spacecraft = 8.3 ft. (2.5 meters)
 (2) A deposit was affixed to spacecraft windows at time of staging. This deposit causes a degradation of image when exposed through some portions of the window. Photos marked with asterisk (*) are partially degraded. Photos marked with two asterisks (**) are sufficiently degraded to be considered useless or nearly so.

7. GEMINI VIII
Ref. 6

GEMINI VIII (March 16, 1966)

70MM PHOTOGRAPHY IDENTIFICATION

CAMERA: Hasselblad, Model 500-C (NASA Modified)
 LENS : Zeiss Planar 80mm Focal Length F: 2.8
 Film : Eastman Kodak, Ektachrome, MS (S.O.217)

Liftoff: 16:41 Zulu (G.E.T.=00:00)
 Splashdown: 3:22 Zulu
 Duration: 10 hr, 41 min, 26 sec.

Command Pilot : Neil A. Armstrong
 Photography By : Major David L. Scott
 Identification By : Richard W. Underwood (NASA/MSC)
 Date : June 6, 1966 (1st Rev.)

ORBIT : Initial Perigee = 87 Nautical Miles; Apogee = 146 Nautical Miles; Circular = 161 Nautical Miles

NOTE : Distances shown are from the nose edge of Gemini VIII to closest point on the Agena #5003. The Agena #5003 is 26 feet (7.92 meters) long and 60 inches (1.52 meters) in diameter. The distance from the camera to the nose of Gemini VIII is approximately 8.3 feet (2.5 meters).

 Identification By: Richard W. Underwood (MSC)
 Date: March 20, 1966

CREDIT: Initial Perigee - 87 Nautical Miles; Apogee - 146 Nautical Miles; Circular - 161 Nautical Miles

NOTE: Distances shown are from the nose edge of Gemini VIII to closest point on the Agena #5003. The Agena #5003 is 26 feet (7.92 meters) long and 60 inches (1.52 meters) in diameter. The distance from the camera to the nose of Gemini VIII is approximately 8.3 feet (2.5 meters).

9. GEMINI X
Ref. 8

GEMINI X (July 18-21, 1966)

Cameras:

- J.A. Maurer, 70mm Space Camera
Lens: Xenotar 80mm Focal Length; F:2.8
- Hasselblad, Super Wide Angle, 70mm
Lens: Zeiss Bioton, 38mm Focal Length, F:4.5
Rolls: 5, 28

Film: Eastman Kodak, Ektachrome, MS (S.O. 217)
70mm Width, 55mm X 55mm Format

NOTE: Rendezvous distances from camera to nearest point on Agena #5005. Distance from camera to nose of approximately 8.3 feet (2.5 meters) accuracy of distances $\pm 5\%$. Ground Elapsed Times (G.E.T.) are estimated unless verified by pilot log entry or apec/rad o transmissions.

70MM PHOTOGRAPHY IDENTIFICATION

Lift Off: 22:20:26 GMT

Photography By: Cdr. John W. Young
Maj. Michael Collins

Splashdown: 21:07:11 GMT

Identification By: R. W. Underwood, NASA/MSC/BL

Duration: 70 hrs. 46 min. 45 sec.

Date: August 5, 1966 (Second Revision)

Altitudes In Nautical Miles (approximate)

10. GEMINI XI
Ref. 9

GEMINI XI (September 12 - 15, 1966)

70MM PHOTOGRAPHY IDENTIFICATION

Cameras:

1. J. A. Maurer, 70mm Space Camera
Lens: Zenator 80mm Focal Length; F: 2.8
Rolls: 10, 11, 12
2. Hasselblad, Super Wide Angle, 70mm
Lens: Zeiss Biogon, 38mm Focal Length; F: 4.5
Rolls: 8, 9

Lift Off: 14:42:26 Zulu
Splash Down: 13:58:20 Zulu
Duration: of flight: 71:15:54

Photography By: Cdr. Charles Conrad, Jr.
Lt. Cdr. Richard F. Gordon, Jr.

Identification By: Richard W. Underwood, NASA/MSC/BL

Date: September 19, 1966

Film: Eastman Kodak, Ektachrome, M5 (S.O. 368)
70mm width, 55mm x 55mm Format

Note: (1) Rendezvous distances from nearest point on Agena #5006
Distance from camera to nose of Gemini is approximately 8.3 feet
(2.5 meters). Accuracy of distances is $\pm 5\%$. (2) Ground elapsed
times (G.E.T.) are estimated unless verified by pilot log entry
or tape/radio transmission. (3) Agena tether line is 100 feet
when fully deployed.

Note: Altitudes are in Nautical Miles
Orbit altitudes: Revolutions 1 through 25 are about 160 Nautical
Miles (290 kilometers) circular. Revolutions 26 and 27 Apogee
740 Nautical Miles (1340 kilometers) and Perigee of 160 Nautical
Miles. Revolutions 28 through 44 (Splashdown) are essentially
160 Nautical Miles circular.

11. GEMINI XII
Ref. 10

GEMINI XII (November 11-15, 1966)

Cameras:

1. Hasselblad, Superwide Angle-70mm
Lens: Zeiss Bioton, 38mm Focal Length, F:4.5
Rolls: 8, 11, 17
2. J. A. Maurer, 70mm Space Camera
Lens: Xenotar, 80mm Focal Length, F:2.8
Roll: 10

Film: Eastman Kodak Ektachrome, MS (S.O. 368)
70mm Width, 55 x 55mm Format

NOTE: Rendezvous distances from camera to nearest point on Agena #5007. Distance from camera to nose of the spacecraft is approximately 8.3 feet (2.5 meters) accuracy of distances $\pm 5\%$. Ground Elapsed Times (G.E.T.) are estimated unless verified by pilot log entry or tape/radio transmissions.

70MM PHOTOGRAPHY IDENTIFICATION

Lift Off: 20:46:33 ZULU

Splashdown: 19:19:06 ZULU

Duration: 94:32:33 Hours

Photography By: Capt. James A. Lovell, Jr.
Maj. Edwin E. Aldrin, Jr.

Identification By: R. W. Underwood, NASA/MSC/BL

Date: November 21, 1966 (Preliminary Edition)
